

2023 Trails: Quinhagak, AK

Layer data was collected from Garmin handheld GPS units during Search and Rescue (SAR) training courses hosted by Nalaquq, LLC in December of 2023. SAR operators from the communities of Quinhagak, Eek, and Goodnews Bay marked routes commonly used by snow machines, ATVs, and small marine vessels. Polygon layers for hazard areas (e.g., dangerous creek crossings, thin ice, shallow mudflats) were also collected. Funding for additional Garmin in-reach units would allow Nalaquq to automate data collection via the Garmin In-Reach API. These data would provide more accurate trail locations for ADOT and create a data stream for monitoring SAR operators in real-time via ESRI dashboards for local incident coordinators during rescue missions. This is important because existing GIS layers for trails are outdated.

Legend

- Quinhagak to Bethel Boat
- Quinhagak to Bethel Snowmachine
